Managed Security Data Centers

Our Network Security Data Centers are dedicated, state of the art environments within multiple *geographically distributed* Tier 1 facilities. Deployed on fully redundant hardware at the network, processing and storage layers maintain automated backup and failover of all critical components. Our strategically managed data centers all meet or exceed industry recognized certifications, including SAS70 Type II and ISO9001, and provide, at a minimum:

- a) Conditioned, uninterrupted, redundant power on multiple power grids with generator backup,
- b) Connectivity via multiple independent top-tier providers,
- c) Automated fire detection and suppression technologies,
- d) Manned and automated physical security, and
- e) 24x7 manned network operations

☒ **MULTILAYERED PROTECTION FRAMEWORK:** The technology framework was designed with a plug-and-play foundation to rapidly and seamlessly integrate the latest filtering layers and techniques available. At the core is our Stacked Classification Framework[®] spam detection system.

☒ **MORE TIMELY VIRUS UPDATES:** Along with zero-hour proprietary worm and virus protection, DefenderSoft incorporates virus engines from industry-leaders, McAfee[®] and Sophos[®]. The tri-layered technology automatically strips threats from incoming email or deposits them into a safe, external quarantine. Programming up-to-the-minute automated rules, we scan for anti-virus updates from McAfee and Sophos every five minutes.

☒ **REAL-TIME ANALYSIS AND REPORTING:** The DefenderSoft Email Threat Center is a sophisticated streaming data environment that monitors the global state of email for spam, viruses, worms and other email threats 24 hours a day, seven days a week. The centralized nature of the service allows MX Logic's experts to update its systems more rapidly than other types of solutions in order to react to new forms of email threats.

☒ **AUTOMATIC AND MANUAL DISASTER RECOVERY:** The Fail Safe Disaster Recovery Service provides automatic email backup in the event a business is struck by an unforeseeable outage or malfunction, or during planned maintenance.
